Edit your photos in a more intuitive way with Microsoft Lightroom The future of photo editing just got a whole lot more fun. Photo editing software developer Adobe has revealed its own first version of Lightroom for Windows Phone, and the software's user interface and features are similar to those found in the desktop app. As with the desktop version, the Windows Phone app has a fairly compact user interface, but it's far from lacking in features. The app features a new way to quickly launch files by including an open button in the media player. You can also use the new app to access and edit photos from your Windows 8/RT devices, and you can even upload and share your own photos. The app supports all formats you would expect from a photo editing app, and includes most of the filters found in the desktop version. You can also edit exposure, white balance, and even rotate your images for optimal results. One key difference between the Windows Phone version of Lightroom and the desktop app is that you can export your photos as a Zip file, which is an easy way to send your images to other devices. You can learn more about Lightroom and how to use it in the Windows Phone app at lightroom.adobe.com. Buy Windows Phone app on Marketplace Update: This app is no longer available on Windows Phone Marketplace, but we have listed the Windows Phone 8 version here.
